

EZ-Close

The EZ-Close was specially designed for the cultivation of hanging plants. It is attached to the end of a microtube, behind a Kameleon dripper. Combining the EZ-Close and Kameleon allows you to irrigate with a high degree of uniformity. The system no longer becomes empty.

Hanging plants are often suspended quite high, so inserting a stake is a more difficult and time-consuming job than using an EZ-close. With the EZ-Close, it is simple to close the dripper, which prevents wet floors and algae growth.

CHARACTERISTICS

- ✔ Cultivation of hanging plants
- ✔ Less time-consuming
- ✔ Weight and closing mechanism
- ✔ Less algae growth

TECHNICAL DATA

Internal diameter of microtube	: 3 mm
External diameter of microtube	: 5 mm
Color	: cream white
Length	: 5.5 cm
Diameter	: 9 mm
Weight	: 11 grams
Material	: plastic
Recommended dripper	: Kameleon/ Kameleon-High 2 l/h
Microtube length	: 20-... cm

INSTALLATION & MAINTENANCE

- ✔ Usually, a pre-assembled dripline is used, with which the main line, Kameleon drippers and microtubes are supplied completely pre-assembled.
- ✔ The EZ close is supplied separately, and assembled on site.
- ✔ The dripline is mounted on the same wire as the hanging plants.
- ✔ The EZ-close may hang slightly above the hanging pot or rest slightly on the soil in the hanging pot.
- ✔ The main line and microtube can be either white or black.
Line clamps are often used for attaching the line to the wire.
